61 Rawson Ave, Barrie **705-735-0000**

Linear Transfer Automation is a Canadian advanced manufacturing and automation company. It designs and builds metal forming and munition production automation systems, robotic automation, parts handling, and integrated production systems that improve productivity, uptime, and repeatability in demanding manufacturing environments. Its capabilities span modernization and controls upgrades for presses and automation, systems integration, precision machining and fabrication, and process engineering. Together, these let Linear deliver complete solutions to primes and Tier suppliers, rather than single-point services. Its flexible production capacity suits the low- to medium-volume, high-mix work typical of defence programs.

Target markets: Canada, United States, Europe, South America.

Barrie-based advanced manufacturing company with automation expertise looking to connect with:

- **Defence Primes**
- **Defence OEMs**
- **Tier 1 & 2 Suppliers**
- **Defence Procurement Partners**
- **Government & Defence Innovation Stakeholders**

Current or Near Future Certifications: ISO9100 (in process), CGP (in process), Cybersecurity, Secure Facilities, NDAs, Staff Screening

Core Capabilities

- Robotics, automation, autonomy and counter-UAS
- Modelling, simulation and digital twins
- Precision machining and fabrication of high-spec components
- Process engineering and production optimization
- Full manufacturing solutions, from design through integration
- High-payload AGVs

Defence & Supply Chain Applications

- Modernizing production lines and automating legacy or labour-constrained processes
- Robotics and material handling
- Producing complex components and assemblies that need consistency and traceability
- Specialized equipment and systems integration
- Quickly adapting production lines as program requirements change
- Strengthening domestic and allied supply chains with reliable, scalable manufacturing
- Munition production lines

Defence Readiness

Existing experience in defence and security supply chains. The integrated structure supports coordinated delivery across multiple manufacturing and technical capabilities.
With group global facilities in Canada, Spain, Germany, Japan, USA
